

4 Latest Features of Android 9.0 Pie

Introduction:

After numerous betas, we all know that the new Android 9.0 has come with the best key features. The three pillars of the latest Android 9.0 operating system are the trend of digital well-being, intelligence and simplicity. And now the official update is available for Google pixel phones and the Essential PH-1, which is the first non-Pixel phone which gets the official update.

Here are some essential new
features of Android 9.0 Pie:

1.

Adaptive battery:

[Android app development company](#)

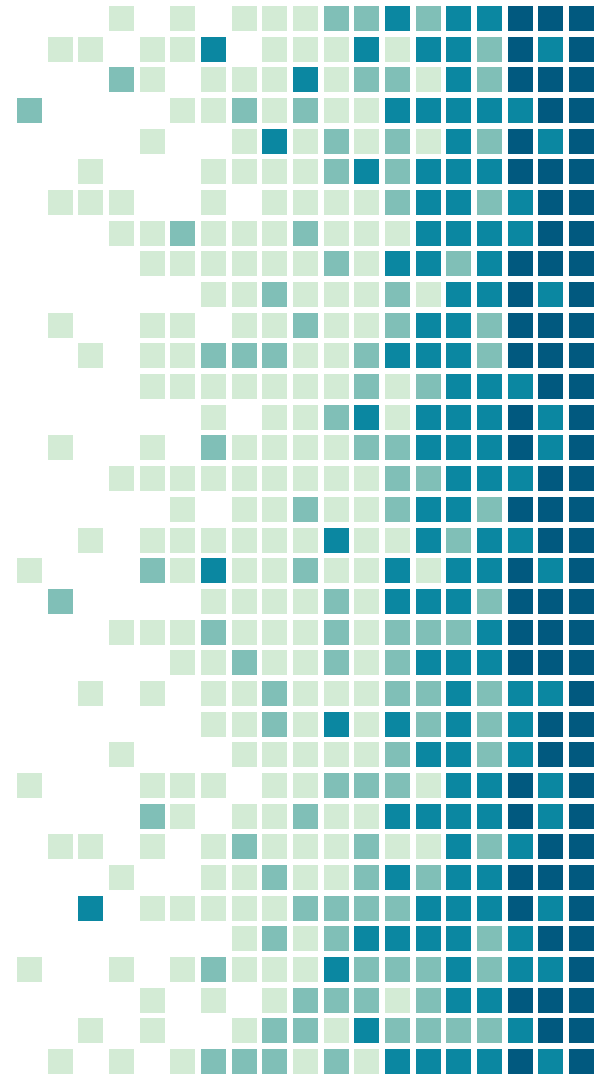

The new feature of Android has the adaptive battery which uses the AI for the optimization of your energy consumption according to the usage of the application. It identifies the application which you're actively using, using frequently and using frequently together as a set or using very rare. Also, based on the individual usage, it prioritizes everything. According to all this information, it restricts the applications which are able to utilise your battery life.

2.

Application action:

The new version helps in accessing the functions which were usually buried within the applications. As the GIF below, the latest Android 9.0 Pie can easily predict and give suggestion about the quick app action for making a call frequently contact person or if you want to listen to Lady Gaga on Spotify. This all seems very helpful and practical.

3.

New Navigation system:

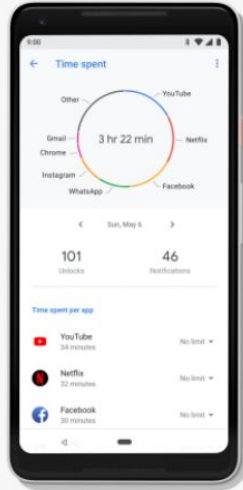

The latest version of Android has a basic interface that includes some basic and easy new navigation gestures. These latest gestures are clearly meant to be instinctive which reminds you of the iPhone. Resulting, everything seems like used to and improved.

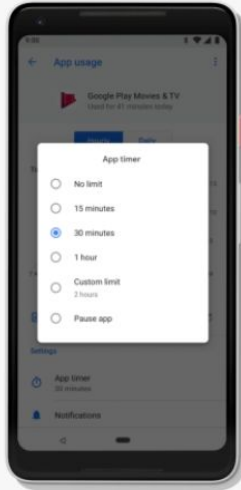

Following are some new gestures which are added to the latest version of Android:

- **Tap:** *accessing the home screen*
- **Long press:** *launching Google Assistant*
- **Drag up:** *accessing the recent applications screen*
- **Full Scan:** *accessing to the app drawer*
- **Swipe to the right:** *scrolling through current applications*
- **Back button:** *going back which only appears in applications*

Dashboard

App Timer

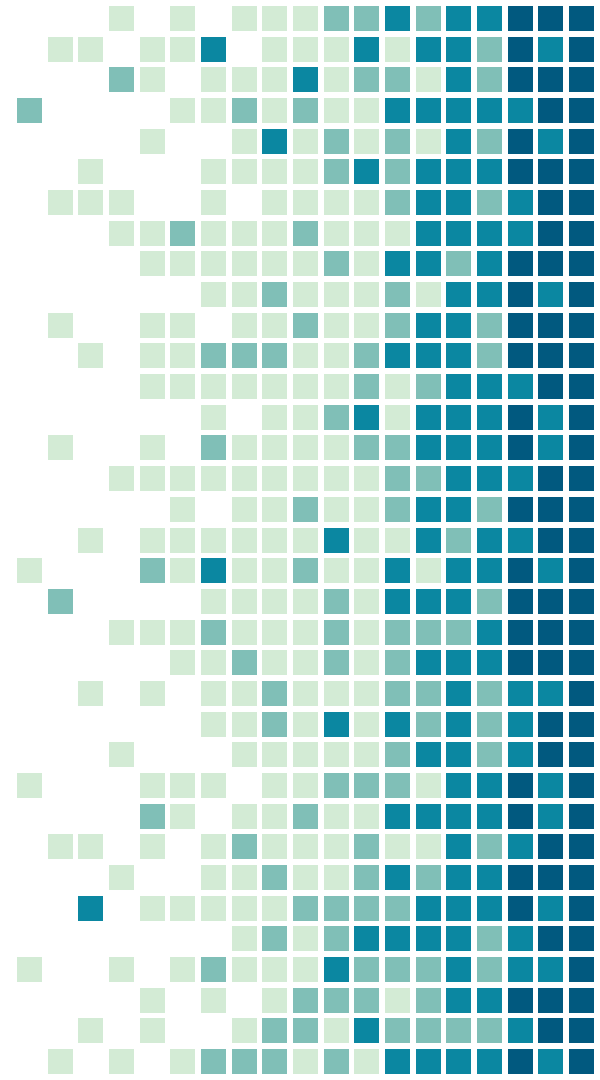

Wind Down

4.

Digital well
being:

Google has announced earlier that the latest Android 9.0 Pie would have mixed features which give the push toward helping their users in developing smart habits especially when they are using smartphones. In the latest version of Android 9.0 Pie, Google has made good Dashboard which shows various views of your application usage. Also, the App timer which according to the order gently reminds you each time when you're wasting your time scrolling.

Appendix:

The latest Android 9.0 Pie is not big leap as compared to Android Oreo with the project Treble or Android Nougat with the fastest updates, but none of them doesn't have such great improvement which the latest version Android 9.0 Pie has. You all notice about it which will be appreciable that it is smarter, simpler and focused on the digital well-being.
